_____

Projects

1. LYRIC-FINDER

Deployed URL:- https://pete-scale.github.io/lyric-finder/

Github:- https://github.com/Pete-Scale/lyric-finder (edited)

- Application to allow the user to find song lyrics.
- search Lyric-listener by Artist name and a song title correctly. View the corresponding music video and then be able to share it with their friends using QR Codes.
- key role in group work in templating html, styling css and ajax call response appending to the page.
- that allows the users to search Lyric-listener by Artist name and song title. The listener can scan or click QR code taken to a youtube video.
- Tools used:- HTML, CSS, Foundation, JQuery and API

2. Jeopardy_trivia_game

Deployed URL:- https://shielded-fjord-19309.herokuapp.com/

Github:- https://github.com/Geoff7709/jeopardy_trivia_game

- An Alex Trebek Tribute application where you can reminisce and play a version of Jeopardy

- Met good quality coding standards (indentation, scoping, naming).
- Utilizes one API that provides over 156,000 trivia questions, clues, categories, answers and more.

3. Worldly-meals
Deployed URL:- https://aqueous-ocean-13819.herokuapp.com/
Github:- https://github.com/glynismullankwok/worldly-meals

- This project is an e-commerce app called International Ingredients to Wordly Meals. "Worldly Meals" for short,it's a meal prep company, where customers can shop and pick up ingredients to cook international meals.
- The meal kits come with all the ingredients needed to prepare the desired meal. What sets our company apart? We offer a great variety of international recipe choices that all come with nutritional data that the customer can use to fit into their own diets and lifestyles.

4. PASSWORD-GENERATOR
Deployed URL:- https://destish21.github.io/password_generator/
Github:- https://github.com/destish21/password_generator

- Password-generator is a front end app that allows users to create random passwords including lower case, upper case, numbers and symbols .
- Users can generate their passwords. Moreover, users can check the password-generator of the app on the community page.
- Tools used: HTML, css, javascript, chartjs, database in array method and more.

_____
